PROFESSIONAL SUMMARY

Data-driven analyst with 4+ years of experience translating complex business problems into structured analytical solutions and actionable insights. Demonstrated expertise in problem structuring, financial modeling, cross-functional collaboration, and delivering high-quality outputs under time pressure. Skilled at converting ambiguous requirements into clear analytical frameworks and defensible recommendations.

WORK EXPERIENCE

Forensics Data Analyst Jan 2026 – Present
EY

- Translated business requirements into clear technical deliverables and analytical frameworks to support data-driven decision-making and risk identification
- Delivered structured data analysis and reporting to support complex business investigations and strategic recommendations
- Collaborated with cross-functional teams to convert messy inputs into synthesized findings aligned with business objectives

Data Analytics Engineer Dec 2023 – Feb 2025
Nestle

- Executed end-to-end data projects from problem structuring through delivery, designing analytical solutions for multiple departments
- Built intuitive dashboards and data visualizations that translated complex datasets into actionable business insights
- Implemented ETL pipelines and database models to support structured analysis and reporting across the organization

Database Developer and Data Science Associate Jun 2022 – Oct 2023
Babil Games

- Led full machine learning projects from problem definition through model development and client presentation, delivering an XGBoost model with 97% accuracy
- Created data warehouses and visualizations that synthesized complex business data into clear, client-ready insights
- Communicated technical findings and recommendations to senior management, translating analytical results into business context

Developer-BI Associate Jun 2020 – Jun 2023
Advanced Business Solutions

- Gathered and analyzed ambiguous user requirements from established clients, structuring them into clear technical and analytical specifications
- Extracted and modeled data from multiple sources to build custom analytics solutions and client-ready reporting frameworks
- Designed data validation and access control mechanisms through SQL stored procedures, ensuring data quality and consistency
